

Technical Bulletin # 128

RE: Molded Plastic Tile Underlay Mat Products

DATE REVISED: January 07, 2005

There are several plastic tile underlay mats offered to the ceramic tile market with various installation methods and materials called for by the manufacturers. Where appropriate, C-Cure recommends use of ProRed 963 Anti-Fracture and Waterproofing membrane or UniFlex 916 Elastomeric Mortar instead of these mats thereby insuring single source responsibility.

If a molded plastic underlay product is going to be used, C-Cure recommends following the recommendations provided by the manufacturer of the mat and obtain a written warranty if the tile assembly is installed according to their recommendation.

C-Cure will provide a system warranty only when C-Cure products are used exclusively. Please contact Technical Services with questions or concerns. 800 895 2874
